

How we celebrated Power Engineers' Day

December 25, 2023

How did your morning start on December 22? Ours started with a charge of vigor and positivity - with energy team building, in which the employees of MKS Chelyabinsk office took part.

On Power Engineer's Day, we decided to test how friendly and cheerful we could solve non-standard tasks. For example, to keep balance on the energy balanceboard, to unravel the meanings of complex terms, to play Dobble, to assemble an energy puzzle and to put on the clothes of a nuclear plant employee at speed!

As a result - good mood, desire to "finish" the passing year 2023, to fulfill all the set tasks! Happy Power Engineer's Day, colleagues!
