

ISS power engineers conquered the Yuryuzan River

June 17, 2024

June - and that means the ISS team goes on a corporate rafting trip! This year the two-day water trip took place on one of the most picturesque rivers of Russia - Yuryuzan. And this is the case when everything came together like puzzles: the incredible beauty of the South Ural nature, hearty company, interesting route, and wonderful weather.

Behind - 20 kilometers traveled by water on two catamarans; bathing in warm Yuryuzan; camping bath; soup cooked on the fire; exploration of coastal caves; soulful conversations around the evening fire.

The rafting trip was corporate, but in many respects it was also a family trip: many colleagues took their children on the trip. And it's great to explore the native land not only with colleagues, but also with their relatives, who for two days became a big friendly company with many children.

We would like to add that the tradition of summer corporate alloys of MKS is already 10 years old. The rivers passed include the Ai, Belaya and Yuryuzan. Rafting is a great opportunity to feel summer in the busy schedule of working days, to get unforgettable emotions, to get to know your native land and your colleagues better.
